
Approved KE–WikiPathways mappings held by the molAOP Builder on 14 August 2026 (432 pairs over 314 Key Events, 158 distinct pathways), joined to the four frozen organ networks. Counts include mappings that predate the D3.1 and D3.2 curation campaigns. The four organ bars must not be summed: 50 of the 538 Key Events belong to more than one network. Panel B covers 536 of the 538 — KE 1419 and KE 1420 were replaced in AOP-Wiki after the networks were frozen and carry no biological level in the pinned release.
