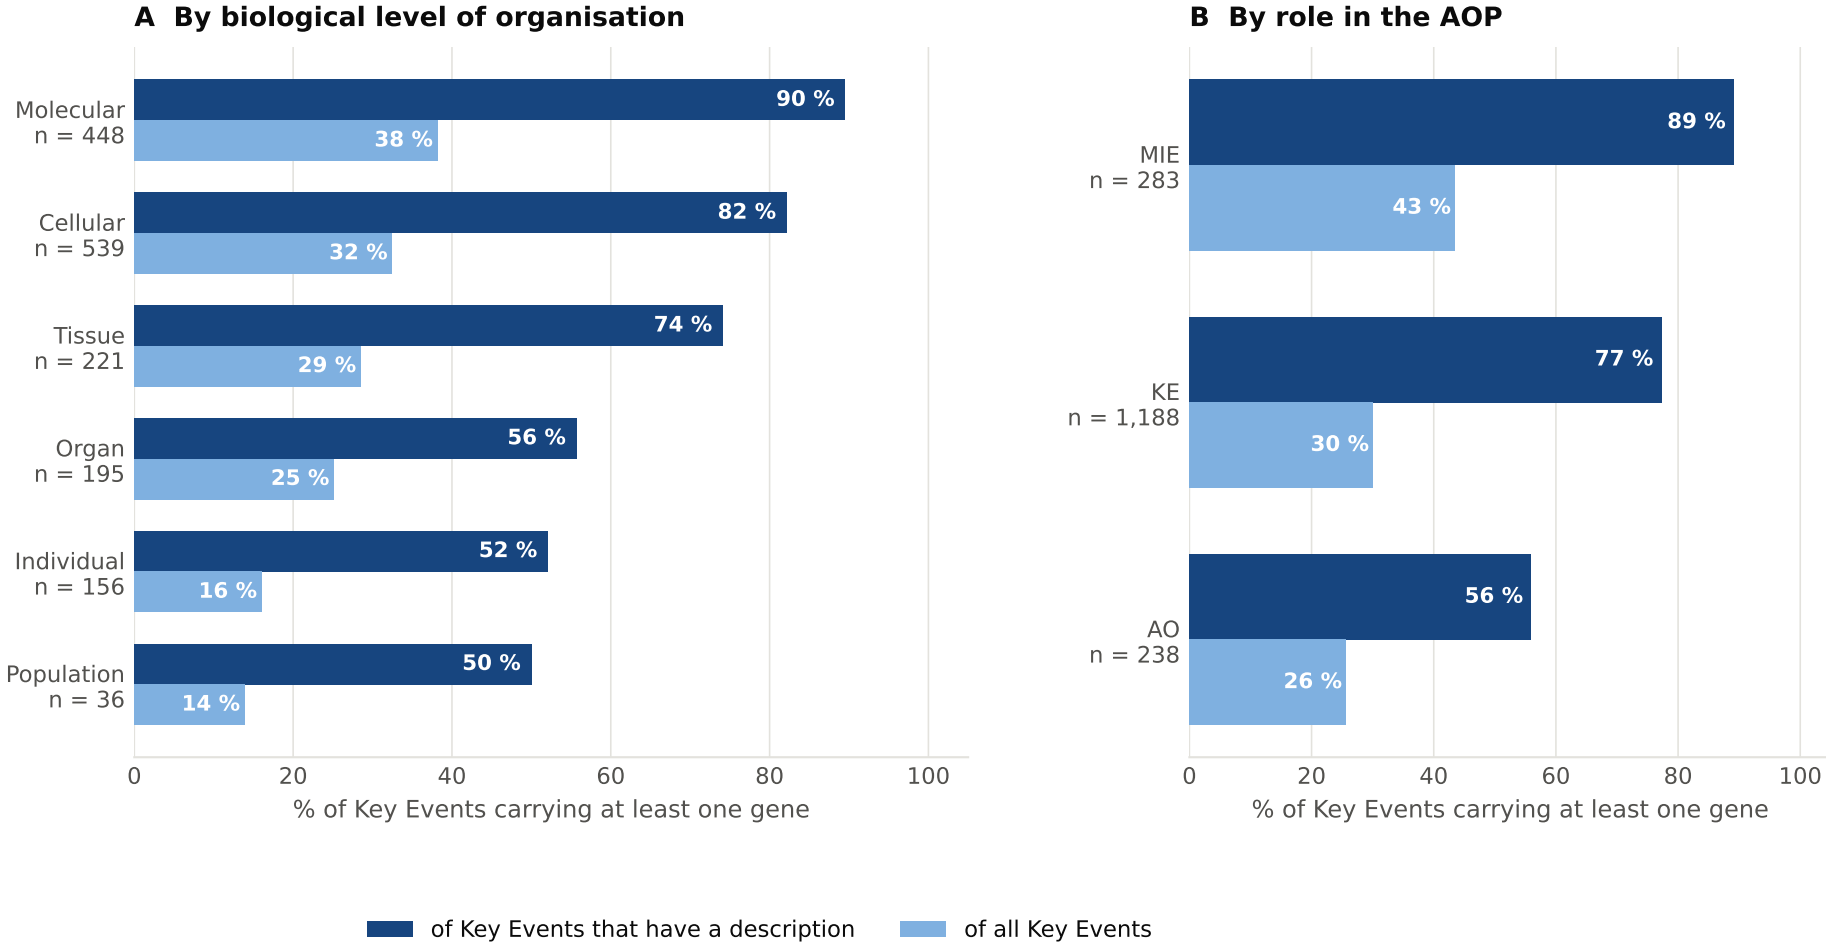
Method 1 finds genes where the text is about molecules



All 1595 Key Events of AOP-Wiki RDF 97191db.
A, among described Key Events: chi2(5) = 64, p = 2.0e-12 (over all KEs: chi2 = 37, p = 7.5e-07).
Conditioning on having a description does not explain the gradient away — it roughly doubles the test statistic.
Roles in B overlap, so those three bars are not a partition of the 1595.
